## Define the Problem Statements

A well-articulated customer problem statement allows the team to find the ideal solution for the challenges customers face. The following problem statements were derived from user research and the PharmaEZ project context.

### Customer Problem Statement Template

| PS   | I am (Customer)                                                      | I'm trying to                                                                                       | But                                                                                                                   | Because                                                                                                                                  | Which makes me feel                                                                                          |
|------|----------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------|
| PS-1 | A patient managing a chronic condition (e.g. hypertension, diabetes) | Refill my monthly prescription medicines online without visiting a pharmacy                         | I cannot purchase Rx medicines without uploading a valid prescription, and no platform guides me through this process | Most e-pharmacy platforms either ignore the prescription requirement or make the upload process unclear and frustrating                  | Anxious, underserved, and forced to make inconvenient pharmacy visits despite having a doctor's prescription |
| PS-2 | A caregiver managing medicines for an elderly parent                 | Find the correct medicine by generic or salt name, verify it is genuine, and check for interactions | Most pharmacy websites show only brand names without salt composition, dosage form, or usage instructions             | Medicine naming is inconsistent across brands, and safety information (side effects, dosage) is rarely shown on e-commerce product pages | Overwhelmed, worried about purchasing the wrong medicine, and unable to make an informed decision            |

|      |                                                    |                                                                                                                        |                                                                                                                   |                                                                                                                             |                                                                                                                           |
|------|----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| PS-3 | A first-time online pharmacy user in a Tier-2 city | Browse healthcare products, compare prices, and complete a secure purchase with cash-on-delivery payment               | Existing platforms are complex, require app downloads, and do not adequately support COD for healthcare purchases | Low digital literacy and distrust of online payment systems combined with complex UI create significant friction            | Excluded from the benefits of online healthcare shopping and forced to rely on limited local pharmacy stock               |
| PS-4 | A pharmacy owner / healthcare store administrator  | Manage inventory, process orders, verify prescriptions, and track revenue from a single dashboard                      | No affordable all-in-one pharmacy management + e-commerce platform exists for small to mid-sized pharmacies       | Enterprise solutions are cost-prohibitive; manual processes lead to stock-outs, missed orders, and no sales analytics       | Frustrated by operational inefficiency and unable to grow the business digitally without significant technical investment |
| PS-5 | A wellness-conscious young professional            | Discover and purchase vitamins, supplements, and personal care products with verified ingredients and customer reviews | Online marketplaces mix counterfeit products with genuine ones, and product descriptions lack clinical details    | The proliferation of counterfeit supplements and misleading marketing claims has eroded trust in online healthcare shopping | Skeptical and hesitant to commit to online purchases of health products, defaulting to overpriced retail outlets          |

## Core Problem Summary

**Primary Problem:** There is no single, trustworthy, and user-friendly online pharmacy platform in India that seamlessly handles both prescription-based medicine purchases (with proper Rx verification) and general healthcare product discovery — while simultaneously providing pharmacy owners with an integrated management and analytics dashboard.

## Root Cause Analysis:

- Lack of a compliant, end-to-end prescription management workflow in existing e-commerce platforms
- Insufficient clinical/medical metadata on product pages (salt composition, dosage form, interactions)
- No centralized, affordable solution combining patient-facing shopping with pharmacist-facing management tools
- Low trust in counterfeit medicines on general marketplaces
